Teaching & Learning Plans

Plan 9: The Unit Circle

Leaving Certificate Syllabus

Project Maths
Development Team
The Teaching & Learning Plans are structured as follows:

**Aims** outline what the lesson, or series of lessons, hopes to achieve.

**Prior Knowledge** points to relevant knowledge students may already have and also to knowledge which may be necessary in order to support them in accessing this new topic.

**Learning Outcomes** outline what a student will be able to do, know and understand having completed the topic.

**Relationship to Syllabus** refers to the relevant section of either the Junior and/or Leaving Certificate Syllabus.

**Resources Required** lists the resources which will be needed in the teaching and learning of a particular topic.

**Introducing the topic** (in some plans only) outlines an approach to introducing the topic.

**Lesson Interaction** is set out under four sub-headings:

i. **Student Learning Tasks – Teacher Input:** This section focuses on teacher input and gives details of the key student tasks and teacher questions which move the lesson forward.

ii. **Student Activities – Possible and Expected Responses:** Gives details of possible student reactions and responses and possible misconceptions students may have.

iii. **Teacher’s Support and Actions:** Gives details of teacher actions designed to support and scaffold student learning.

iv. **Checking Understanding:** Suggests questions a teacher might ask to evaluate whether the goals/learning outcomes are being/have been achieved. This evaluation will inform and direct the teaching and learning activities of the next class(es).

**Student Activities** linked to the lesson(s) are provided at the end of each plan.
Teaching & Learning Plan 9: The Unit Circle

Aims

- To enable students to become familiar with the unit circle
- To use the unit circle to evaluate the trigonometric functions sin, cos and tan for all angles

Prior Knowledge

Students should be able to plot and read coordinates on a Cartesian plane. They should recognise that the circle, as the locus of all points equidistant from a given point, the centre, is uniquely defined by its centre and radius. Students should be familiar with the concept of a function as a one to one or many to one mapping, and with the domain and range of a function. Students should recall the theorem of Pythagoras and be able to calculate \( \sin x \), \( \cos x \), and \( \tan x \) from the right-angled triangle, i.e. the trigonometric ratios (SOHCAHTOA) and know that \( \tan x = \frac{\sin x}{\cos x} \).

Learning Outcomes

As a result of studying this topic, students will be able to

- associate the coordinates of points on the circumference of the unit circle with the cos and sin of the angle made by the radius containing these points, with the positive direction of the \( x \)-axis
- use the reference angle to calculate the sin, cos and tan of any angle \( \theta \), where \( 0^\circ \leq \theta \leq 360^\circ \)
- find values of sin, cos and tan of negative angles and of angles >360° from the unit circle
- solve equations of the type \( \cos x = \pm \frac{1}{2} \)
Relationship to Leaving Certificate Syllabus

<table>
<thead>
<tr>
<th>Sub-topics</th>
<th>Ordinary Level</th>
<th>Higher Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.2 Coordinate Geometry</td>
<td>Recognise that $x^2 + y^2 = r^2$ represents the relationship between the $x$ and $y$ co-ordinates of points on a circle centre $(0,0)$ and radius $r$.</td>
<td></td>
</tr>
<tr>
<td>2.3 Trigonometry</td>
<td>Define $\sin x$ and $\cos x$ for all values of $x$. Define $\tan x$.</td>
<td>Solve trigonometric equations such as $\sin n\theta = 0$ and $\cos n\theta = \frac{1}{2}$, giving all solutions.</td>
</tr>
</tbody>
</table>

Resources Required

Compasses, protractors, clear rulers, pencils, formulae and tables booklet, Geogebra, Autograph, Perspex Model of Unit Circle (last 3 desirable but not essential).

Introducing the Topic

Trigonometric functions are very important in science and engineering, architecture and even medicine. Surveying is one of the many applications. Bridge builders and road makers all use trigonometry in their daily work.

The mathematics of sine and cosine functions describes how many physical systems behave. As a playground Ferris wheel rotates, the height above a central horizontal line can be modelled by a sine function. The displacement of the prongs of a vibrating tuning fork from the rest position is described by a sine function. The resulting displacement with time of a weight attached to a spring when it is displaced slightly from its rest position is described by a sine function. Tidal movements and sound waves are two other vibrations described by sine functions. Anything that has a regular cycle (like the tides, temperatures, rotation of the earth, etc) can be modelled using a sine or cosine function. The piston engine is the most commonly used engine in the world. Its motion can be described using a sine curve. [http://www.intmath.com/Trigonometric-graphs/2_Graphs-sine-cosine-period.php](http://www.intmath.com/Trigonometric-graphs/2_Graphs-sine-cosine-period.php) (Scroll to the bottom of the web page to get the piston applet.)

When students have drawn the graph of $\sin x$, it would then be useful to show the applet on the piston as it may not make much sense initially. Alternatively, show it initially and again after Student Activity 7 when it should make more sense.

The fundamental background of trigonometry finds usage in an area which is a passion for many people i.e. music. Sound travels in waves and in developing computer generated music, combinations of sine and cosine functions are used to generate the sounds of different musical instruments. Hence sound engineers and technologists who
research advances in computer music and hi-tech music composers have to relate to the basic laws of trigonometry.

Techniques in trigonometry are used in navigation particularly satellite systems and astronomy, naval and aviation industries, oceanography, land surveying, and in cartography (creation of maps).

Domestic a.c. is supplied at 230 V, 50 Hz. The period is 0.02 seconds, and the range is approximately [-325 V, 325 V].
### Lesson Interaction

<tr>
<td>» What have you discovered about the (x) and (y) coordinates for an angle of (30^\circ) on the unit circle?</td>
<td>• The (x) and (y) coordinates represent (\cos 30^\circ) and (\sin 30^\circ).</td>
<td>» Walk around and check that Student Activity 2A is being filled. When all the sheets are filled ask individual students for their answers.</td>
<td></td>
</tr>
</tbody>
</table>
| » What is the significance now of the radius of the circle being 1? | • The \(\sin 30^\circ = \text{opp/hyp}\) and \(\cos 30^\circ = \text{adj/hyp}\)  
• \(\text{hypotenuse} = \text{radius, and,} \ |r| = 1, \ \sin 30^\circ = \text{opp} = y\) and \(\cos 30^\circ = \text{adj} = x\) | | |
| » Can you generalise this for any angle \(\theta < 90^\circ\)?  
» Complete Student Activity 2B. | » Students complete Student Activity 2B for any angle \(\theta\) in the first quadrant and show that \(\sin \theta = y/1, \ \cos \theta = x/1, \ \tan \theta = y/x\) | | |
| » The coordinates of any point on the unit circle may be written as \((x, y)\) the Cartesian coordinates, or as \((\cos \theta, \sin \theta)\). | | » Do students understand that the \(x\) and \(y\) coordinates of points on the unit circle are equal to the \(\cos\) and \(\sin\) of the angle \(\theta\) made by the radius containing these points, with the positive direction of the \(x\)-axis? | |
### Student Learning Tasks: Teacher Input

<table>
<thead>
<tr>
<th>Student Activities: Possible and Expected Responses</th>
<th>Teacher’s Support and Actions</th>
<th>Checking Understanding</th>
</tr>
</thead>
<tbody>
<tr>
<td>» What are the signs for sin, cos and tan of an angle in the first quadrant and why? Fill in Student Activity 2C.</td>
<td>• All positive, since the ( x ) and ( y ) coordinates are both positive in the first quadrant.</td>
<td>» Ask the class and then an individual to explain. Ask the class if they agree with the answers and if not to explain why not.</td>
</tr>
<tr>
<td>» Using the unit circle, how would you get the cos 60° and sin 60°? Check using a calculator.</td>
<td>» Students make an angle of 60° in standard position and read the coordinates. ( \cos 60° = x ) and ( \sin 60° = y )</td>
<td>» Distribute Appendix A (Unit Circle).</td>
</tr>
<tr>
<td>» What are the sin, cos and tan of 0° and 90° from what you have learned? Fill in Student Activity 2D.</td>
<td>» Students read the coordinates on the circumference for 0° and 90° from the Unit Circle and fill in the table on Student Activity 2D.</td>
<td></td>
</tr>
<tr>
<td>» What did you notice about tan 90°?</td>
<td>• It’s undefined, due to division by zero.</td>
<td></td>
</tr>
<tr>
<td>» Using the calculator, find the tan 89°, tan 89.999°, tan 89.99999°. What do you notice?</td>
<td>• Tan increases very rapidly as the angle tends to 90°.</td>
<td></td>
</tr>
<tr>
<td>» Working in pairs write in short points a summary of what you have learned.</td>
<td>» Ask different students to read out points made in their summaries - concept of the unit circle; angle in standard position; initial ray and terminal ray; forming a right angled triangle, in the first quadrant with the origin as a vertex.</td>
<td>» Were students able to summarise what they had done?</td>
</tr>
<tr>
<td></td>
<td>» Write the points on the board.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>» Distribute Student Activity 3.</td>
<td></td>
</tr>
</tbody>
</table>

<td></td>
<td>» Do Java applets contribute to understanding?</td>
</tr>
<tr>
<td>» Fill in the summary on <strong>Student Activity 6A</strong>.</td>
<td>» Students fill in <strong>Student Activity 6A</strong>.</td>
<td>» Distribute <strong>Student Activity 6</strong>.</td>
<td></td>
</tr>
<tr>
<td>» Find the sin (–210°). We only dealt with positive values for angles before. What is the difference between positive and negative angles?</td>
<td>» Positive angles represent anticlockwise rotations and negative angles are clockwise rotations.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Student Learning Tasks: Teacher Input

» Can you suggest a strategy for dealing with evaluating the trig functions for negative angles?

» In which quadrant is $-210^\circ$?

» What is the sign of sin in the second quadrant?

» What positive angle is equal to $-210^\circ$?

» What is the reference angle for $-150^\circ$?

» What is the sin ($-210^\circ$) equal to?

» Do the exercises on **Student Activity 6B** on negative angles.

» Can you suggest a strategy for finding trig functions of angles greater than $360^\circ$? For example cos $910^\circ$?

» Do the exercise in **Student Activity 6C** on angles greater than $360^\circ$.

### Student Activities: Possible and Expected Responses

- Draw the unit circle.
- Second quadrant
- Positive
- $360^\circ - 210^\circ = 150^\circ$
- $30^\circ$
- $\therefore \sin (-210^\circ) = + \sin 30^\circ$.

### Teacher’s Support and Actions

- Ask students to come up with the strategy themselves first.
- Having given them a few minutes, ask students for the steps and show each step on the board.

### Checking Understanding

- Can students come up with the strategy by themselves, given that they are used to drawing the unit circle?
- Can students calculate sin, cos and tan for negative angles?

- Can students come up with the strategy themselves first.
- Given the students a few minutes then asks students for the steps and show each step on the board.
- Can students calculate sin, cos and tan for angles greater than $360^\circ$?

<tbody>
<tr>
<td>» We are now going to solve the equation in <strong>Student Activity 7B</strong> using the summary of the unit circle and formulae on <strong>Student Activity 7A</strong>.</td>
<td>• Students work in pairs, discussing the problem.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>» Teacher refers students to their summary on <strong>Student Activity 7A</strong></td>
<td>» Have students been able to write ( \theta ) in terms of ( A ) in <strong>Student Activity 7B</strong>?</td>
</tr>
<tr>
<td>( \sin \theta = \frac{1}{\sqrt{2}} ), ( 0^\circ \leq \theta \leq 360^\circ )</td>
<td>• We are trying to find all the angles ( \theta ) where ( \sin \theta = \frac{1}{\sqrt{2}} )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>» What are we trying to find out here?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Sin is positive, therefore ( \theta ) could be in the first or the second quadrant.</td>
<td>» Refer students back to <strong>Student Activity 6A</strong>.</td>
<td>» When students get a problem, are they first clarifying what the problem is asking?</td>
</tr>
<tr>
<td>» How do you know which quadrants the angle ( \theta ) could belong to?</td>
<td>• The reference angle is the acute angle whose sin is ( \frac{1}{\sqrt{2}} ), i.e. ( 45^\circ )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>» How will you find the reference angle ( A )?</td>
<td>• Reference angle cannot have a negative trig function associated with it as it is always an acute angle.</td>
<td></td>
<td>» Are students using the unit circle effectively to solve this problem?</td>
</tr>
<tr>
<td>» Could the reference angle have a negative trigonometric function associated with it? Explain.</td>
<td>• Use the formulae for each quadrant. First quadrant: ( \theta = A = 45^\circ ), Second quadrant: ( 180^\circ - \theta = A ) ( \therefore \theta = 180^\circ - A = 135^\circ )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>» Knowing the reference angle, how do you find the angle ( \theta )?</td>
<td>• ( \sin \theta = \frac{1}{\sqrt{2}} ), for all values of ( \theta ). Use what you learned about trig functions of angles &gt; 360°.</td>
<td></td>
<td>» Are students using what they have learned previously about angles greater than 360°?</td>
</tr>
<tr>
<td>» Solve the above equation i.e. ( \sin \theta = \frac{1}{\sqrt{2}} ), for all values of ( \theta ). Use what you learned about trig functions of angles &gt; 360°.</td>
<td>• ( \therefore \theta = 45^\circ + n360^\circ ) or ( \theta = 135^\circ + n360^\circ, n \in Z )</td>
<td></td>
<td></td>

KEY:  » next step   • student answer/response
Student Activity 1

Student Activity 1A

The unit circle – A circle whose centre is at (0,0) and whose radius is 1
Any point on the circumference of the circle can be described by an ordered pair \((x,y)\).
The coordinates of B are (0.6, 0.8)
What are the coordinates of C, D, and E?
C = _________________, D = _________________, E = _________________.
In which quadrant are both \(x\) and \(y\) positive? _______________________________________
In which quadrant is \(x\) negative and \(y\) positive?_____________________________________
In which quadrant is \(x\) positive and \(y\) negative?_____________________________________
In which quadrant is \(x\) negative and \(y\) negative? ____________________________________

Angles in standard position - the vertex is at the origin, with the initial ray as the positive direction of the \(x\)-axis, and the other ray forming the angle is the terminal ray.

Student Activity 1B

Angles in the first quadrant

Draw an angle of 30° in standard position on the unit circle on Student Activity Sheet 1A. Mark the initial ray and the terminal ray. Label the point where the terminal ray meets the circumference as \(\theta\).
The coordinates of \(\theta\) are _____________________________________________________.
Student Activity 2A

Drop a perpendicular from Q to the x-axis to construct a right angled triangle, centred at (0, 0).
What is the length of the hypotenuse? ____________________________________________
What is the length of the opposite? ____________________________________________
What is the length of the adjacent? ____________________________________________

Using trigonometric ratios, (not a calculator), calculate the sin 30°, cos 30° and the tan 30°.
\[ \sin 30° = \quad \cos 30° = \quad \tan 30° = \quad \]

Compare these with the values of the \(x\) and \(y\) coordinates of Q. What do you notice about the \(x\) and \(y\) coordinates of Q and the trigonometric functions sin 30°, cos 30° and tan 30°?

Check the answers using a calculator.
\[ \sin 30° = \quad \cos 30° = \quad \tan 30° = \quad \]

Student Activity 2B

Application to any angle in the first quadrant \(0° < \theta < 90°\)
\[ \sin \theta = \quad \cos \theta = \quad \tan \theta = \quad \]

Student Activity 2C

What signs will sin, cos and tan have in the first quadrant? Why have sin, cos and tan got these signs in the first quadrant?

<table>

Student Activity 3

Student Activity 3A

Angles in the second quadrant $90^\circ < \theta < 180^\circ$

On the unit circle on Appendix A, mark an angle of $150^\circ$ in standard position. Read the $x$ and $y$ coordinates of the point $Q'$, where the terminal ray intersects the circumference. $(x, y)$ of point $Q'$ are ____________________________

Using what you have learned about the coordinates of points on the circumference of the unit circle, fill in the following:

\[
\begin{align*}
\cos 150^\circ &= \ldots \\
\sin 150^\circ &= \ldots \\
\tan 150^\circ &= \ldots 
\end{align*}
\]

Check these values using the calculator.

\[
\begin{align*}
\cos 150^\circ &= \ldots \\
\sin 150^\circ &= \ldots \\
\tan 150^\circ &= \ldots 
\end{align*}
\]

Compare with

\[
\begin{align*}
\cos 30^\circ &= \ldots \\
\sin 30^\circ &= \ldots \\
\tan 30^\circ &= \ldots 
\end{align*}
\]

Student Activity 3B

Drop a perpendicular from point $Q'$, to the negative direction of the $x$-axis, to make a right angled triangle, with angle $A$ at the origin.

What is the value of $A$ in degrees?

\[
\begin{align*}
\text{A} &= \ldots \\
\text{A} &= \ldots 
\end{align*}
\]

Using the trigonometric ratios on triangle $OB'Q'$, what is $\sin A = \ldots$ $\cos A = \ldots$

Student Activity 3C

$A$ is called the reference angle. Describe the reference angle?

Angles in the third quadrant \(180^\circ < \theta < 270^\circ\)

On the unit circle on Appendix A, mark an angle of \(210^\circ\) in standard position. Read the \(x\) and \(y\) coordinates of the point \(Q''\), where the terminal ray intersects the circumference. \((x, y)\) of point \(Q''\) are _____ Hence: \(\cos 210^\circ = _____\) \(\sin 210^\circ = _____\) \(\tan 210^\circ = _____\)

Check these values using the calculator. \(\cos 210^\circ = _____\) \(\sin 210^\circ = _____\) \(\tan 210^\circ = _____\)

Compare with \(\cos 30^\circ = _____\) \(\sin 30^\circ = _____\) \(\tan 30^\circ = _____\)

Is there a relationship between trig functions of angles in the first and third quadrants?

_________________________________________________________________________________

**Explanation of the relationship**

Drop a perpendicular from point \(Q''\), to the negative direction of the \(x\)-axis, to make a right angled triangle \(OB'Q''\). What is the value of \(A\) in degrees?

Using the trigonometric ratios on triangle \(OB'Q''\), what is \(\sin A = _____\) \(\cos A = _____\)

\(A\) is called the Reference angle. Describe the reference angle?

What do you notice about the \(\sin\) and \(\cos\) of the reference angle and \(\sin 210^\circ\) and \(\cos 210^\circ\)?

What is the image of triangle \(OB'Q''\) by \(S_o\)?

What is the relationship between triangle \(OB'Q''\) and its image by \(S_o\)?

Hence what is the relationship between ratio of sides in triangle \(OB'Q''\) and the ratio of the sides of its image by \(S_o\)?

Therefore \(210^\circ\) in the third quadrant has a reference angle of _____ in the first quadrant.

\(\sin 210^\circ = _____\) \(\sin 30^\circ = _____\), \(\cos 210^\circ = _____\) \(\cos 30^\circ = _____\)

**Application to any angle in the third quadrant.**

\(\sin \theta = _____\)

\(\cos \theta = _____\)

\(\tan \theta = _____\)

\(\sin A = \text{opp/hyp} = _____\) (A in the 3rd quadrant)

\(\cos A = \text{adj/hyp} = _____\) (A in the 3rd quadrant)

\(\sin A = _____\) (A in the 1st quadrant)

\(\cos A = _____\) (A in the 1st quadrant)
Express A in terms of $\theta$ and $180^\circ$. ______________________ equation (i)

Write down the relationship between $\sin \theta$ and the $\sin A$ in the third quadrant and then rewrite the answer using equation (i) above. ______________________

</tbody>
</table>
Angles in the fourth quadrant $270^\circ < \theta < 360^\circ$

On the unit circle on Appendix A, mark an angle of $330^\circ$ in standard position. Read the $x$ and $y$ coordinates of the point $Q'''$, where the terminal ray intersects the circumference. The $(x, y)$ coordinates of point $Q'''$ are _________________

Hence: 

\[
\begin{align*}
\cos 330^\circ &= \_\_\_\_\_\_ \\
\sin 330^\circ &= \_\_\_\_\_\_ \\
\tan 330^\circ &= \_\_\_\_\_\_ \\
\end{align*}
\]

Using the calculator: 

\[
\begin{align*}
\cos 330^\circ &= \_\_\_\_\_\_ \\
\sin 330^\circ &= \_\_\_\_\_\_ \\
\tan 330^\circ &= \_\_\_\_\_\_ \\
\end{align*}
\]

Compare with: 

\[
\begin{align*}
\cos 30^\circ &= \_\_\_\_\_\_ \\
\sin 30^\circ &= \_\_\_\_\_\_ \\
\tan 30^\circ &= \_\_\_\_\_\_ \\
\end{align*}
\]

Is there a relationship between trig functions of angles in the first and fourth quadrants? ______________________________________________________________________

Explanation of the relationship

Drop a perpendicular from point $Q'''$, to the negative direction of the $x$-axis, to make a right angled triangle $OBQ'''$. What is the value of $A$ in degrees? ______________

Using the trigonometric ratios on triangle $OBQ'''$, 

\[
\begin{align*}
\sin A &= \_\_\_\_\_\_ \\
\cos A &= \_\_\_\_\_\_ \\
\end{align*}
\]

$A$ is called the reference angle. Describe the reference angle? ____________________________________________________________

What do you notice about the sin and cos of the reference angle and that of $330^\circ$? ______________

What is the image of triangle $OBQ'''$ by $S_x$? ______________

What is the relationship between triangle $OBQ'''$ and its image by $S_x$? ______________

Hence what is the relationship between ratio of sides in triangle $OBQ'''$ and the ratio of the sides of its image in the $y$-axis? __________________________________________________________

Therefore $330^\circ$ in the fourth quadrant has a reference angle of _____ in the first quadrant

\[
\begin{align*}
\sin 330^\circ &= \_\_\_\_\_\_ \\
\sin 30^\circ &= \_\_\_\_\_\_ \\
\cos 330^\circ &= \_\_\_\_\_\_ \\
\cos 30^\circ &= \_\_\_\_\_\_ \\
\end{align*}
\]
Student Activity 5

**Application to any angle in the fourth quadrant.**

\[
\begin{align*}
\sin \theta & = \quad \quad \\
\cos \theta & = \quad \quad \\
\tan \theta & = \quad \quad \\
\sin A & = \text{opp/hyp} = \quad (A \text{ in the 4th quadrant}) \\
\cos A & = \text{adj/hyp} = \quad (A \text{ in the 4th quadrant}) \\

**Student Activity 6A**

**Summary on finding trig functions of all angles**

Fill in on the unit circle, in each quadrant, the first letter of the trigonometric function which is positive in each quadrant.

Mark in an angle $\theta$ and its reference angle $A$ for each quadrant. Use a different unit circle for each situation.

Fill in also in each quadrant, the formula for the reference angle given an angle $\theta$ in that quadrant.

**Student Activity 6B**

**Negative angles**

Find, without using the calculator. Show steps.

\[
\sin (-120^\circ) \\
\cos (-120^\circ) \\
\tan (-120^\circ)
\]

**Student Activity 6C**

**Angles greater than 360°**

Find, without using the calculator. Show steps.

\[
\sin 450^\circ \\
\cos 450^\circ \\
\tan 450^\circ \\
\sin 1250^\circ \\
\cos 1250^\circ \\
\tan 1250^\circ
\]
**Student Activity 7**

**Student Activity 7A**

If we know \(A\), how do we calculate \(\theta\)? Always draw a unit circle.
