## Student Activity Theorem 4

## Use in connection with interactive file "Theorem 4" on the Student's CD.

Give all answers correct to the nearest degree.

1. What shape is $A B C$ ? $\qquad$
2. How many sides make up the shape $A B C$ ? $\qquad$
3. Move the point $B$, so that the angle $A B C$ equals $58^{\circ}$. What are the measures of the angle $B C A$ and $B A C . \quad B C A=$ $\qquad$ . $B A C=$ $\qquad$ _.
4. When angle $A B C$ equals $58^{\circ}$ what is the sum of the measures of the angles $A B C, B C A$ and BAC? Measure of $A B C+$ Measure of BCA + Measure of BAC $=$ $\qquad$
5. Move the point $C$, so that the angle $B C A$ equals $60^{\circ}$. Read the values of the angle $A B C$ and $B A C$. $A B C=$ $\qquad$ . $B A C=$ $\qquad$ .
6. When the angle $B C A$ equals $60^{\circ}$, what is the sum of the values of the angles $B C A, A B C$ and BAC? Measure of $A B C+$ Measure of BCA + Measure of BAC $=$ $\qquad$
7. Click on the Tick Box on the interactive file to reveal the wording of this theorem. Did you come to this conclusion? $\qquad$ -.
8. What is the measure of the angle $A B C$ in each of the following triangles?

9. What are the values of the angles $A C B$ in each of the following diagrams?
