## Student Activity: To investigate $f(x)=e^{x}$ and $g(x)=\ln (x)$

Use in connection with the interactive file, ' $\mathrm{e}^{\mathrm{x}}$ and $\ln (\mathrm{x})$ ', on the student's CD.

## Note $\operatorname{Ln}(x)=\log _{e} x$.

1. Use a calculator to find an approximate value for e correct to 3 decimal places.
2. 

a. Complete the following table giving answers correct to 3 decimal places.

| $x$ | $y=\mathrm{e}^{x}$ | $\ln (y)$ |
| :--- | :--- | :--- |
| 3 |  |  |
| 2 |  |  |
| 1.5 |  |  |
| 1 |  |  |
| 0.5 |  |  |
| 0 |  |  |
| -0.5 |  |  |
| -1 |  |  |
| -1.5 |  |  |

b. What is the relationship between $\ln (y)$ and $x$ in the above table?
c. On the same axis and scale draw the graphs of $f(x)=e^{x}$ and $\mathrm{f}^{-1}(x)$ using the data provided in the table above.

d. Using the interactive file complete the following table for any 4 values of $A$ and the corresponding values of $\mathrm{A}^{\prime}$ and state what pattern you notice.

| $\mathrm{A}(x, y)$ | $\mathrm{A}^{\prime}(x, y)$ |
| :--- | :--- |
|  |  |
|  |  |
|  |  |

e. What do you notice about the shapes of these graphs in relation to each other?
$\qquad$
f. Given $e^{1.34}=3.82$, what will $\ln (3.82)$ equal?
$\qquad$
g. Given $\ln (0.33)=-1.1$, what is $\mathrm{e}^{-1.1}$ ?
h. What line is $e^{x}$ reflected in to give $\ln (x)$ ?
i. What conclusion have you arrived at with regard to the relationship between the function $\mathrm{e}^{\mathrm{x}}$ and $\ln (\mathrm{x})$ ?
