Find the anti-derivative of the function $f(x)=3$ which passes through the point $(1,5)$.
Q1. How is this question different to all the previous anti-derivative questions you have encountered?
$\qquad$
Q2. Find the indefinite form of the anti-derivative of $f(x)=3$.
$\square$
Q3. Represent the indefinite form of the anti-derivative graphically below by sketching the antiderivatives for each of the following values of $C=\{-3,-2,-1,0,1,2,3\}$.
