Diagnostics Test on Simplifying Rational Algebraic Expressions

1. Simplify the following fractions where possible:

(i)	$\frac{2+x}{2x}$
(ii)	$\frac{a+ab}{a}$
(iii)	$\frac{18x^2y}{27xy^3}$
(iv)	$\frac{2(a-b)}{c+2}$
(v)	$\frac{5-r}{5r}$
(vi)	$\frac{y+yr}{r+1}$

2. Apply your knowledge of factorising to simplify the following fractions where possible:

(i)	$\frac{b^2-9}{b+3}$
(ii)	$\frac{b^2+9}{b+3}$
(iii)	$16-4a^2$
. ,	4 <i>a</i> +8

r+1

3. Apply your knowledge of factorising to simplify the following fractions where possible:

(i)	$\frac{x^2+3x+2}{x+2}$
(ii)	$\frac{x^2-3x+2}{x+1}$
(iii)	$\frac{x^2(x-3)+4(3-x)}{x^2-x-6}$

4. Simplify:

(i)	$\frac{2pq}{p+2q} \times \frac{2p^2}{4p}$	
(ii)	$\frac{x^2-4x+4}{3x+3}$	× ———

5. Simplify:

(i)	$3y^{2}$.	$6z^3$	$18z^{4}$
(I)	z^2 .	$\overline{y^2}$	y^3

(ii)
$$\frac{p^2 - 4p - 21}{p^2 - 9} \div \frac{p - 7}{3 - p}$$

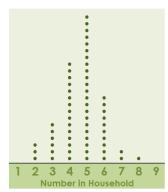

(iii)
$$\frac{r^2+5r+6}{3r+9} \div \frac{4-r^2}{4-2r}$$

Developing Ideas

The data for the line plot is from two classes in a school. The sample size is n = 59.

1. Describe the data in as many ways as you can using numerical and shape descriptions. Words, fractions, decimals and percentages can be used in your description.

2. One person was absent on the day of the survey. Someone said they would give you €100 if you could guess the number of people in that student's household. What number would you guess?

3. Explain why you chose this number.

4. Describe your chances of winning the €100 by picking this number. Words, fractions, decimals and percentages can be used in your description.

5. Describe how you might you increase your chances of winning the \notin 100?

6. Describe your chances of winning the \notin 100 now.

						<i>,</i>											
																	Т
			 		 				 								+
																	_

7. Explain how you could further increase your chances of winning.

																	Г
	 	<u> </u>	 		 	 			 					 		 	H
																	L

8. Is it possible that the student who was absent could have 8 people in their household?

9. Is it probable that the student who was absent could have 8 people in their household? Explain.

Analysing Distributions

The distribution of weights of school bags of all 200 students in a school is shown in the diagram. We will call this our *population distribution*.

1. Describe the population distribution by making one statement about each of the three characteristics indicated below:

(a)	Shape of distribution:
(b)	Location of data (central tendency):
(C)	Spread of data (dispersion):

- **2.** Before you take some samples from the distribution, you must make two predictions.
 - (a) If you took a sample of size 30 and found the mean of the sample describe the chances of getting a mean between 1 kg and 2 kg.

(b))	If	yo	u to	ook	as	sam	ple	e of	siz	e 3	0 a	nd	foı	ind	the	e m	ear	1 01	f th	e sa	amj	ple	wh	at	nuı	nb	er v	νοι	ıld	you	<u>ا</u>
		e	xpe	ct 1	:0 g	get?	,																									

3. How many different samples of size 30 can be taken from a population of size 200?

Sample Number			r			Sets					Mean	Standard Deviation

20												

4. The table below shows the results of 19 samples each of size n = 30. Create one more sample of size 30 and record the results in the table.

For the next few questions use the STAT mode on your calculator.

- **5.** Calculate, correct to one decimal place, the mean of your sample and write it in the **2**nd **last column**.
- **6.** Calculate, correct to one decimal place, the standard deviation of your sample and write it in the **last column**.

7.	(a)	Calculate, correct to one decimal place, the mean of the $\mathbf{2^{nd}}$ last column.

(b)	W	/ha	nt c	ou	ld v	we	cal	l tł	nis	me	ean	?																			
(C)		С	om	пра	re	thi	s n	iea	n t	o t	he	me	an	of	the	e p	орι	ıla	tio	n d	ist	rib	uti	on	(μ)), v	vhi	ch	is 5	5.1	kg.	

8. (a) Write down the range for the values in the **2**nd last column.

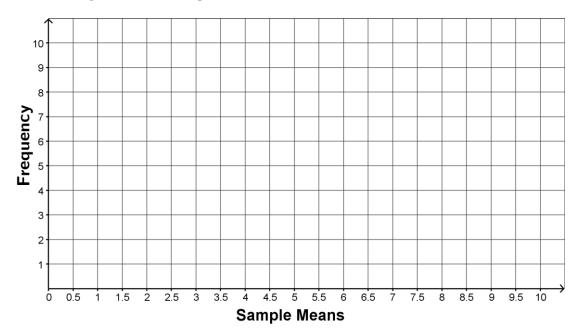

(b)	V	Vha	at c	cou	ld v	we	cal	l tł	nis	rai	nge	?																		
(c)	C	Con	ıpa	ire	thi	s ra	ang	ge t	t o	he	rar	ıge	e of	`th	e p	op	ula	tio	n c	list	rib	uti	ion	, w	hic	:h i	s 9	.8 I	kg.	

9. (a) Calculate, correct to one decimal place, the standard deviation of the **2**nd last column.

(b)	What could we call this standard deviation?
(c)	Compare this standard deviation to the standard deviation of the population
	distribution (σ), which is 2.6 kg.

10. Fill in the table below using your sample means. There is a row provided if you want to use tally marks. [Note that 5.0–5.5 means at least 5.0 kg but less than 5.5 kg etc.]

	-					0					
Sample Means	2.5 - 3.0	3.0 - 3.5	3.5 - 4.0	4.0 - 4.5	4.5 - 5.0	5.0 - 5.5	5.5 - 6.0	6.0 - 6.5	6.5 - 7.0	7.0 - 7.5	7.5 - 8.0
Tally											
Frequency											

Compare the distribution of the sample means to the population distribution by making 12. one statement about each of the three characteristics indicated below:

(a)	Shape of distribution:	
(b)	Location of data (central tendency):	
(C)	Spread of data (dispersion):	

13. In **Q2** above you described the chances of getting a mean between 1 kg and 2 kg (a) from a sample of size 30. How good was your prediction?

(b))	Y	ou	als	so p	ore	dic	teo	d w	ha	t n	um	be	r y	ou	wo	oulo	d e	хре	ect	to	get	t fo	r tł	1e I	me	an	of	a s	am	ple	e of
		S	ize	30	. H	lov	v go	00	d w	vas	yo	ur	pre	edi	ctio	on?	,															

Using a Sample to Make a Statement about the Population Mean, (μ)

N.B. Ignore any findings from the earlier investigation about the school bags.

We are going to see if we can use a sample to make a statement about the (unknown) population mean.

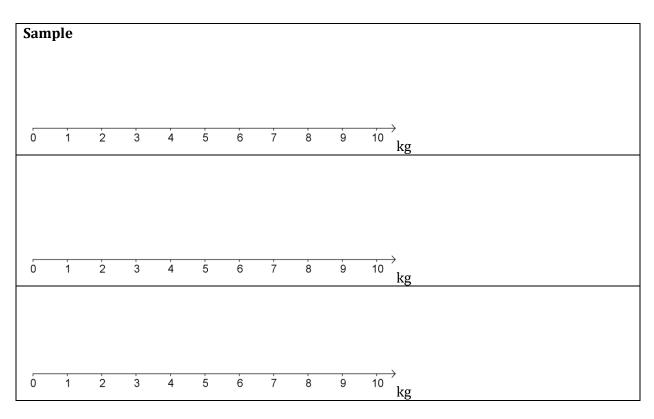

A sample of size 30 was taken of the weights of school bags of post-primary students. The mean of the sample (\bar{x}) is 4.5 kg. The standard deviation of the sample is 2.5 kg.

1. Make a statement about the value of the population mean.

2. There are 3 spaces (Sample, Population, Sampling Distribution of the Means) provided below for any sketches you would like to draw.

(a) Write down and (b) sketch everything you know about each distribution where possible.

Hints
What do we know and what do we not know?
What do we need to know to find what we do not know?
What do I know that can be helpful?
What's similar about this problem to what I already know, and what's different?

3. Write a statement about the population mean (stating the level of confidence being used).

Summary of Our Findings

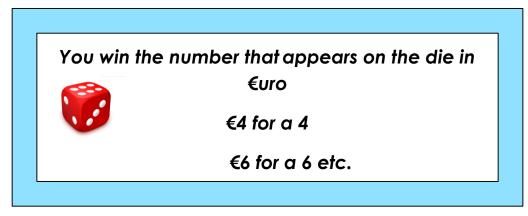

Fill in what you know about the Shape, Centre and Spread of each of the distributions in the table below. Words, numbers and symbols can be used.

	Shape	Centre	Spread
Population		μ	σ
One Large Sample			
All Sample Means			

Fair Game – Student Activity 1

A funfair game called *Numbers Up!* involves rolling a single die.

These are the rules:

Working in pairs, use a die or the random integer function on your calculator, to generate numbers from 1 to 6.

Play the game 20 times and record your results in the table below:

Game	Amount Won	Game	Amount Won
1		11	
2		12	
3		13	
4		14	
5		15	
6		16	
7		17	
8		18	
9		19	
10		20	

1. How much did you win?

2. Work out your average (mean) amount won per game having played the game 20 times.

																Γ

3. When you have the value for the class mean, fill in the table below:

Your Average Amount Won	
The Class Average Amount Won	

4. Does your average differ from that of the class?

		<u> </u>																											
coul	ld exj	olai	n tł	nis?)																								
	cou	could exp	could explai	could explain th	could explain this?																								

5. What do you think the class average figure represents in the context of the game?

6. Would you pay €2 to play this game? Give a reason for your answer.

	2	-			2	0				2							

7. If you ran the *Numbers Up!* game at the funfair, how much would you charge people to play it? Explain your answer.

8. What do you think would be a fair price to pay to play this game? Why?
