## Connecting Mathematics in Strand 2 - Student Activity 2

Below are two similar triangles.

Fig. 6.1
(i) $\quad A$ and $B$ are the points $(5,5)$ and $(10.8,14.4)$ as shown. $|A C|$ is 15.5 cm . Name the co-ordinates of $C$.
Answer: C( , )
(ii) Using the length formula, verify that $|A C|$ is 15.5 cm .

(iii) $\quad D$ and $E$ are the points $(25,10)$ and $(36.6,28.8)$ as shown. $|D F|$ is 31 cm .

Name the co-ordinates of F.
Answer: $F(\quad, \quad)$
(iv) Show using figure 6.1 that the scale factor, $k$, is 2 .

(v) How would you describe the image that is formed?

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Explain your answer by referring to the scale factor, $k$.

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

(vii) By using a ruler/straight edge, find the centre of enlargement, $P$, on figure 6.1 page 10. Show construction rays. Name the coordinates of the point $P$.

Answer: $P(\quad, \quad)$
(viii) By using an alternative method to the one above, find the coordinates of the centre of enlargement.

Would it be possible to always use this alternative method for finding the centre of enlargement? Explain.

(ix) Find $|\angle A C B|$ using trigonometry.

(xvi) Using the diagram below construct the centroid ( $S$ ) of $\triangle A B C$ and construct the centroid ( $T$ ) of $\triangle D E F$.

(xvii) The centroid of a triangle can be calculated using the following formula:
$\left(\frac{x_{1}+x_{2}+x_{3}}{3}, \frac{y_{1}+y_{2}+y_{3}}{3}\right)$.
Calculate the centroid for each triangle, correct to 1 d.p.

(xix) A special property of the centroid of a triangle is that it will always divide each median into two segments whose lengths are in the ratio $2: 1$, with the longest segment nearest the vertex.

Note: The median of a triangle is a line joining a vertex to the midpoint of the opposing line.

Show that the special property mentioned above is true for the median [ $B M$ ] in $\triangle A B C$.

(xx) *LC(HL) Verify, using the above property, that the centroid of a triangle formula is as follows:

$$
\left(\frac{x_{1}+x_{2}+x_{3}}{3}, \frac{y_{1}+y_{2}+y_{3}}{3}\right)
$$
