## Teaching \& Learning Workshops

## Financial Maths

## Task 1 - Modelling Investments

A bank offers a yearly compound interest rate of $20 \%$. Paul wisnes to invest $€ 100$. What will the value of this investment be at the end of $n$ years?

Each Box represents €10, colour in Paul's initial investment.
In a different colour, add in his interest received after 1 year.

Now repeat the steps above using the same two colours but also add in his interest received after 2 years in a new colour. (Any fractional parts should be represented by a partially completed box)

Repeat the above steps adding in his interest received after 3 years.

What do you notice about the pattern?
$\square$

Fill in the blanks.
This is a/an $\qquad$ sequence with a common $\qquad$ of $\qquad$ .

In the yellow boxes provided, write an expression to describe each of John's investments in the form € $100 \times 1.2^{t}, t \in N$.

## Task 2 - Investments

Jenny wishes to invest some money. She invests $€ 20$ at the start of each month for five months, in a savings account which offers a monthly rate of $0.5 \%$. What will the value of this investment be at the end of five months?

## Task 3 - Modelling

Jenny wishes instead to invest her money for 5 years She invests $€ 20$ at the start of each month for five years, into a savings account which offers a monthly rate of $0.5 \%$. Model this investment as a group of individual deposits.
$\square$

## Task 3 - Extension

Jenny invests $€ 20$ at the start of each month for three years. She then reduces her investment to $€ 15$ for the remaining two years. What will the value of this investment be at the end of five years?

## Complex Numbers

## Task 1

If $A$ and $B$ are integers, what is the effect on $A$ of multiplying by $B$ ?

Describe the effect of multiplication on a real number by another real number. Refer to the scale factor, location and rotation.

What is the effect of raising $A$ to the power of $n$ ?

If $A$ is a real number and $b$ is a positive integer, what is the effect on $A$ of multiplying by each
of the following?

| $\boldsymbol{A} \boldsymbol{x}(-\boldsymbol{B})^{\boldsymbol{n}}$ | Rotation | Number of <br> Rotations | Scale Factor |
| :--- | :--- | :--- | :--- |
| $A x(-3)^{1}$ | $180^{\circ}$ |  |  |
| $A x(-3)^{2}$ | $180^{\circ}+180^{\circ}$ |  |  |
| $A x(-3)^{3}$ |  |  |  |
| $A x(-3)^{4}$ |  |  |  |
| $A x(-3)^{n}$ |  |  |  |
| $A x(-1)^{1}$ |  |  |  |
| $A x(-1)^{2}$ |  |  |  |
| $A x(-1)^{3}$ |  |  |  |
| $A x(-1)^{n}$ |  |  |  |
| $A x(-B)^{n}$ |  |  |  |

What is the effect on A of multiplying by $(-1)^{\frac{1}{2}}$ ? Why might we ask students to consider this?

Choose a value for $A$. Can you suggest a suitable position for $A x(-1)^{\frac{1}{2}}$ on the diagram below?

Notes:

## Task 2

Open the GeoGebra file:
https://tinyurl.com/WS4task2-2
$z_{1}$ and $z_{2}$ are complex numbers with a product $z_{3}$. By moving $z_{1}$ and observing $z_{3}$ consider the effect on $z_{1}$ of multiplication by $z_{2}$. Use the check boxes to support this investigation.
Can you suggest in words a rule for multiplying complex numbers?

$z_{1}=-1+i$ is a complex number with a modulus of $\sqrt{2}$ and argument of $135^{\circ}$. Set $z_{2}=z_{1}$, now $z_{3}=(-1+i)^{2}$. Describe the effect of squaring $z_{1}$, referring to the moduli and the angles. Can you describe the effect on a complex number $z$, of raising $z$ to the power of $n$ ?

## Task 3

This task should be approached from the perspective of a higher level 5th year student.
Prior Knowledge:

- JC Number Operations
- Modulus of a complex number
- Multiplication of complex numbers using modulus and angles.

Link to Syllabus (LC OL):

- interpret the modulus as distance from
the origin on an Argand diagram and
calculate the complex conjugate
Link to Syllabus (LC HL):
- calculate conjugates of sums and
products of complex numbers
use De Moivre's Theorem

Open the GeoGebra file "complex Conjugate"
https://www.geogebra.org/classic/wrxxyrsf
$z_{1}, z_{2}$ and $z_{3}$ are complex numbers. Move $z_{1}$. What is the effect on $z_{2}$ of moving $z_{1}$ ?
$Z_{3}$ is the product of $z_{1}$ and $z_{2}$. Why does $z_{3}$ always lie on the real axis?

Click checkbox $|z|$. Choose a value for $z_{1}$, and record the modulus of $z_{1}, z_{2}$ and $z_{3}$.
Repeat this process with a different value for $\mathrm{Z}_{1}$.
Can you describe the relationship between the moduli?

Click the checkbox "Angle"
Change the position of $z 1$ and note the effect on the angles $\alpha, \beta$ and $\gamma$.
Write down in words any relationship you can find between $\alpha, \beta$ and $\gamma$.

Construct a line segment from $z_{1}$ to $z_{2}$.

What questions could you ask students to connect Pythagoras' Theorem to the modulus of a complex number?
$\square$

Using the trigonometric ratios, write down the coordinates of the point $z_{1}$ and $z_{2}$. Why might this investigation help students understand their study of De Moivre's Theorem?

Why might this investigation help students to understand the role of the conjugate in complex division?

## Effective GeoGebra

## Rich Task 1 - Problem

A Scout Troop have pitched 3 tents to sleep in and wish to build one fire to cook with. Where is the fairest location for the fire?

$(1,4)$

## Rich Task 2 - Option 1

Task to investigate effect of $a, b$ and $c$ in the function of

$$
g(x)=a+b * \sin (c * x)
$$

1. Use GeoGebra to graph the function $f(x)=\sin (x)$
2. Using sliders to control the values of $a, b$ and $c$, graph the function of

$$
g(x)=a+b * \sin (c * x)
$$

3. Write down the equation of as many functions as you can that have a maximum value of 3 and a minimum value of -3 .
4. Write down the equation of as many functions as you can that have a maximum value of 3 and a minimum value of 1 .
5. Write down the equation of as many functions as you can that intersect with roots of $f(x)=\sin (x)$
$\square$

- Two points to bear in mind while you're doing this activity
- How could this activity be used with other types of functions?
- What do the sliders in this activity represent mathematically?

## Rich Task 2 - Option 2

Task to investigate effect of $a, b$ and $c$ in the function of

$$
h(x)=a *(x+b)^{2}+c
$$

1. Use GeoGebra to graph the function

$$
h(x)=a *(x+b)^{2}+c
$$

2. Using sliders to control the value of $\mathrm{a}, \mathrm{b}$ and c , graph

$$
h(x)=a *(x+b)^{2}+c
$$

3. Write down the equation of as many functions as you can that have a minimum $y$ value of -1 .
$\square$
4. Write down the equation of as many functions as you can that have a turning point at the origin.
$\square$
5. Write down the equation of as many functions as you can that have roots of 2 and 6.

- Two points to bear in mind while you're doing this activity
- How could this activity be used with other types of functions?
- What do the sliders in this activity represent mathematically?

## Extension Questions:

1. Write down the equation of as many functions as you can that have no roots.
2. What changes would you make to the function to make it invertible?

## The Circle

Plot as many points as you can that are equidistant from the point $(0,0)$

| Point | x-coordinate | $y$-coordinate | radius |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

https://www.geogebra.org/classic/ir2steag

How would you use this diagram to guide students to the discovery of the equation of a circle when the centre is not at $(0,0)$ ?

| Point |  |  |  |  | radius |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

## Calculus

GeoGebra File: https://www.geogebra.org/classic/k55z2yfh

## Lesson Study Workshops

## The X Factor - St. Mark's Community School

## Task 1

For the next 5 minutes, work on your own and factorise the terms in as many ways as possible

## 8

## Task 2

Students are given handouts with 2 copies of $3 x+6$ and 2 copies of $4 y+8$

Students will be asked to write down ways to describe the diagram

## Task 3

Factorise the boxes and fill in the blanks.

| 4 | 8 |
| :--- | :--- |

$\qquad$ $+$ $\qquad$ $=$ $\qquad$ ( $\qquad$ )

| $2 x y$ | $+4 x$ | +8 |
| :--- | :--- | :--- |

$\qquad$ $+$ $\qquad$ $+$ $\qquad$ $=$ $\qquad$ (

## The Power that lies beneath - Woodbrook College

Every year the amount of plastic in the ocean triples!! In 2019, there is 8 million tons of plastic in our ocean. That is the equivalent to 5 grocery bags filled with plastic for every foot of the coastline in the world!

(i) How many tons of plastic will be there in 15 years?
(ii) How many tons of plastic were there 15 years ago?

In 2019, there is 8 million tons of plastic in our ocean. That is the equivalent to 5 grocery bags filled with plastic for every foot of the coastline in the world!
(i) How many grocery bags could you fill with plastic in 15 years?
(ii) 1 ton $=1000 \mathrm{~kg}$. How many kg of plastic was there in the ocean 5 years ago? Give your answer correct to 2 decimal places.
(iii) 1 ton $=2240 \mathrm{lbs}$ (pounds). How many lbs of plastic will there in 15 years? Give your answer correct to 1 decimal place.

1 foot $=30.48 \mathrm{~cm}$ and 1 mile $=5280$ feet. There are 598675.97 km of coastline in the world. How many miles of coastline is there? Give your answer to the nearest mile.

## Think outside the triangle! - St. Gerald's College

## GROUP TASK:

List all the connections that you can identify in the diagram below.

A step in the right direction - Presentation Secondary School, Castleisland

## Get Un-Snookered - Holy Family Community School, Rathcoole

## Problem Posed to the Students:

## GET UN-SN®®KERED!

Matthew and his friends are playing pool. The pool table has the following dimensions 12 units by 6 units. There is no direct path to the Eight Ball, so Matthew must take a shot that rebounds off the cushion first before hitting the Eight Ball into the pocket. He knows that the white ball has the coordinates $(6,2)$ and the Eight Ball has the coordinates $(10,3)$. His selected pocket is positioned at $(12,0)$.

He wants to calculate the required angle to complete this shot as necessary.

Find this angle in as many ways as possible.

## Support Diagram if needed:

## A journey in finance - St. Mary's College

## Lesson Question

## 2014 (142) VOLKSWAGEN GOLF COMFORTLINE €13,800 1.6 TDI MANUAL 5SPEED 105HP 5DR

On the $7^{\text {th }}$ February it is Alex's $18^{\text {th }}$ Birthday. On Alex's 21 st birthday he wants to buy a car. Alex's parents have agreed to pay for his fist year's insurance as a $21^{\text {st }}$ birthday gift. He decides he would like a 2014 Golf TDI equivalent to the one above. Depreciation for this model is $17 \%$ per annum. He opens a bank account which will give him an AER of $3 \%$.

How much per month will he have to save in order to afford the car, and the first year of tax, if he makes his first lodgment on his $18^{\text {th }}$ birthday?

Extension:
If Alex later decides that he would prefer to simply take out a loan of the full amount on his 21 st birthday. If the APR is also $3 \%$ on the loan, what will his monthly repayments be?

## Straight to the nth game - Ardee Community School

## Question:

Johnny is 13 years of age and he wants to join an online gaming community because his friends say it's "cool". $€ 3$ is the joining fee for under 15 's plus a subscription of $€ 2$ a month thereafter.
His mother allows him to join on a trial basis for 10 months, buying him the subscription for his birthday. Show how much this would cost in as many ways as you can.

## Part 2.

If Johnny were to join the gaming community for 2 years how much would it cost?
Remember that it costs $€ 3$ to join the community and there is a monthly subscription of $€ 2$.
This time you may not simply add or multiply.

## Part 3.

If he remained a member until he is 21 ? How much would this cost overall?
Can we work out the total cost of membership for any particular month in an easier way?
$\qquad$

|  |  |  |
| :--- | :--- | :--- |

## Circling "Longitude" - St. Mary’s Secondary School, Charleville

A drone is rented to fly over longitude and capture aerial photographs. Will I Am is operating the drone and is given an aerial map of the festival with the best location for an aerial photograph of each stage marked with a large dot.

## Task 2

The organisers of the festival have text Will and requested the following:

Find, in as many ways as you can, the co-ordinate he needs for the drone.

## Percentage Paradox - Coláiste Bríde, Enniscorthy

Nike t-shirts are reduced by $85 \%$ in a sale. If the sale price of a t-shirt is €5, what was its original price?
Fill in the table and then show this relationship on a graph.

| $\%$ of original <br> price | Price <br> (€) |
| :---: | :---: |
| 0 |  |
| $15 \%$ |  |
| $100 \%$ |  |

What type of relationship is this?
